

method = "get" for enable of data this will be
method = "post" → for security this can be use

no limit to post the data (infinite)
there is limit to post the data. (6000 approx character)

eg: <body>

<h3> demo on email, url, date, time, week, month fields </h3> (html5)

<!-- for this old version is not supported -->

<form action = "uploadedfile.php" method = "post">

⇒ <label> enter the email id </label> bec' no size limit

<input type = "email" id = "em" name = "em">

⇒ <label> enter url </label>

<input type = "url" id = "url1" name = "url1">

⇒ <label> enter date </label>

<input type = "date" id = "date1" name = "date1">

min = "1990-01-01" max = "2023-11-08"

⇒ <label> select time </label>

<input type = "time" id = "t" name = "t">

⇒ <label> select month </label>

<input type = "month" id = "fbc" name = "ABC">

⇒ <label> select week </label>

<input type = "week" id = "fbc" name = "ABC">

⇒ <label> select date & time </label>

<input type = "datetime-local" id = "date" name = "time">

* upload - file copied from client ~~server~~ to server site
* download - " " " " server " " to client site.

Page No. _____
Date _____

⇒ <label> file upload </label>

<input type="file" id="f1" name="f1">

<!-- any type, any size, 1 file are allowed -->

if not then programme restricted that not by browser -->

⇒ <input type="file" id="f1" name="f1" multiple>

<!-- any type, any size, N files -->

⇒ <input type="file" id="f3" name="f3" accept="

".Pdf, .Png, .Jpg" >

only these 3 file will accept not more than that; here we are controlling.

will accept, whatever we write, which type of files we want.

⇒ <input type="file" id="f3" name="f3" accept="

image/*" >

All type of images will accept to upload.

⇒ <input type="file" id="f3" name="f3" accept="

"audio/*" >

All type of audio file will accept.

⇒ <input type="file" id="f3" name="f3" accept="

"video/*" >

All type of video file will accept.
