

Before 1989 we don't have websites, After that Tim Berners-Lee invented websites.

→ IOT (Internet of things)

→ Static page:- Static page translation, execution & execute result @ client machine.

- Ex:- html, css, js, xml.
- Client side technologies / Frontend technology.

→ dynamic page:- It translation, execution & results @ server machine, but result displaying client machine.

Ex:- Servlet, ASP.net, php, django...

→ server side technology / Backend technology

WWW (W3 consortium).

→ world wide web Consortium (called W3C) is the organisation that observes the development of web technologies.

Eg:- ICC (cricket match ICC organization handle)

* 1st browser "Mosaic" is used by user to open the websites.

07/10/23 (Sat)

Clients:- Client which devices are support to access Internet / browsing those all devices called "Clients".

→ Interfaces between user & client machine. (Browser required.)
(mediator)

users:- who are working or operating client devices those are called "end-user".
→ human are the users.

* clients are many but users are only one i.e human beings.
